## Amendment to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application.

## Listing of Claims:

Claim 1 (Withdrawn): A method for preparing a lubricated surface of an article to reduce the break-out force and sliding frictional force, comprising:

- a. providing one or more surfaces;
- b. applying a lubricant to at least one of the surfaces to form a coated surface; and
- c. exposing the coated surface to an energy source at about atmospheric pressure.

Claim 2 (Withdrawn): The method of claim 1 further comprising mixing the lubricant with a solvent to form a lubricant-solvent solution prior to applying the lubricant to the surface, the weight percent lubricant in the lubricant-solvent solution ranging from about 0.1 to about 95, in addition ranging from about 0.5 to about 50, and further in addition ranging from about 0.5 to about 10.

Claim 3 (Withdrawn): The method of claim 2 further comprising heating the coated surface to evaporate the solvent in the lubricant-solvent solution at a temperature ranging from about ambient to about 150°C, in addition ranging from about 80°C to about 130°C, for a period of time ranging from about 0.5 minute to about 60 minutes, in addition ranging from about 0.5 minute to about 40 minutes, and further in addition ranging from about 0.5 minute to about 30 minutes, the heating step occurring after applying the lubricant-solvent solution to the surface and prior to exposing the coated surface to the energy source.

Claim 4 (Withdrawn): The method of claim 1 wherein the lubricant is selected from one or more groups comprising a fluorochemical compound, a perfluoropolyether compound, a functionalized perfluoropolyether compound, and a polysiloxane-based compound.

Claim 5 (Withdrawn): The method of claim 1 wherein the lubricant contains additives selected from one or more groups comprising free radical initiators, viscosity modifiers, surfactants, wetting agents, anticorrosive agents, anticoxidants, antiwear agents, buffering agents, and dyes.

Claim 6 (Withdrawn): The method of claim 1 wherein the energy source is an ionizing gas plasma.

Claim 7 (Withdrawn): The method of claim 1 wherein the energy source is ionizing radiation.

Claim 8 (Withdrawn): The method of claim 6 wherein the gas is selected from one or more groups comprising helium, neon, argon, krypton, air, oxygen, carbon dioxide, carbon monoxide, water vapor, nitrogen, and hydrogen.

Claim 9 (Withdrawn): The method of claim 1 further comprising additionally exposing the surface to the ionizing gas plasma prior to applying the lubricant.

Claim 10 (Currently Amended): An article having reduced break-out force and reduced sliding frictional force comprising one or more surfaces and a perfluoropolyether compound habricant applied to at least one of the surfaces wherein it forms a perfluoropolyether-coated surface, the perfluoropolyether-coated habricant-coated surface subsequently exposed to an energy source at about atmospheric pressure.

Claim 11 (Currently Amended): The article of claim 10 wherein the perfluoropolyether compound lubricant is mixed with a solvent to form a perfluoropolyether-solvent lubricantsolvent solution prior to applying the lubricant to the surface.

Claim 12 (Currently Amended): The article of claim 10 wherein the coated surface is heated, the heating step occurring after applying the <u>perfluoropolyether-solvent lubricant-solvent</u> solution to the surface and prior to exposing the coated surface to the energy source.

Claim 13 (Currently Amended): The article of claim 10 wherein the <u>perfluoropolyether</u> compound is a functionalized <u>perfluoropolyether</u> compound. <del>Inbrieant is selected from one or more groups comprising a fluorochemical compound, a perfluoropolyether compound, a functionalized perfluoropolyether compound, and mixtures thereof.</del>

Claim 14 (Currently Amended): The article of claim 10 wherein the <u>perfluoropolyether</u> <u>compound is mixed</u> with <u>lubricant contains</u> additives selected from one or more groups comprising free radical initiators, viscosity modifiers, thickening agents, surfactants, wetting agents, anticorrosive agents, rust inhibiting agents, antioxidants, antacids, antiwear agents, buffering agents, dyes, and mixtures thereof.

Claim 15 (Original): The article of claim 10 wherein the energy source is an ionizing gas plasma.

Claim 16 (Original): The article of claim 10 wherein the energy source is ionizing radiation.

Claim 17 (Previously Presented): The article of claim 15 wherein the gas is selected from one or more groups comprising helium, neon, argon, krypton, air, oxygen, carbon dioxide, carbon monoxide, water vanor, nitrogen, hydrogen, and mixtures thereof.

Claim 18 (Currently Amended): The article of claim 10 wherein the surface is additionally exposed to the ionizing gas plasma prior to applying the perfluoropolyether compound lubricant.

Claim 19 (Withdrawn): A method for preparing a lubricated surface of an article to reduce the break-out force and sliding frictional force, comprising:

- a. providing one or more surfaces;
- exposing at least one of the surfaces to an ionizing gas plasma at about atmospheric pressure to form a plasma-treated surface; and
- c. applying a lubricant to the plasma-treated surface to form a coated surface.

Claim 20 (Withdrawn): The method of claim 19 further comprising mixing the lubricant with a solvent to form a lubricant-solvent solution prior to applying the lubricant to the surface, the weight percent lubricant in the lubricant-solvent solution ranging from about 0.1 to about 95, in addition ranging from about 0.5 to about 50, and further in addition ranging from about 0.5 to about 10

Claim 21 (Withdrawn): The method of claim 19 wherein the lubricant is selected from one or more groups comprising a fluorochemical compound, a perfluoropolyether compound, a functionalized perfluoropolyether compound, and a polysiloxane-based compound.

Claim 22 (Withdrawn): The method of claim 19 wherein the lubricant contains additives selected from one or more groups comprising free radical initiators, viscosity modifiers, surfactants, wetting agents, anticorrosive agents, antioxidants, antiwear agents, buffering agents, and dves.

Claim 23 (Withdrawn): The method of claim 19 wherein the gas is selected from one or more groups comprising helium, neon, argon, krypton, air, oxygen, carbon dioxide, carbon monoxide, water vapor, nitrogen, and hydrogen.

Claim 24 (Withdrawn): The method of claim 20 wherein the coated surface is heated to evaporate the solvent in the lubricant-solvent solution at a temperature ranging from about ambient to about 150°C, in addition ranging from about 80°C to about 130°C, for a period of time ranging from about 0.5 minute to about 60 minutes, in addition ranging from about 0.5 minute to about 40 minutes, and further in addition ranging from about 0.5 minute to about 30 minutes, the heating step occurring after applying the lubricant-solvent solution to the surface.

Claim 25 (Currently Amended): An article having reduced break-out force and reduced sliding frictional force comprising one or more surfaces, at least one of the surfaces exposed to an ionizing gas plasma at about atmospheric pressure and a <u>perfluoropolyether compound lubricant</u> applied to the plasma-treated surface to form a coated surface.

Claim 26 (Previously Presented): The article of claim 25 wherein the gas is selected from one or more groups comprising helium, neon, argon, krypton, air, oxygen, carbon dioxide, carbon monoxide, water vapor, nitrogen, hydrogen, and mixtures thereof.

Claim 27 (Currently Amended): The article of claim 25 wherein the <u>perfluoropolyether</u> <u>compound lubricant</u> is mixed with a solvent to form a <u>perfluoropolyether-solvent lubricant</u> solvent solution prior to applying the <u>perfluoropolyether compound lubricant</u> to the surface.

Claim 28 (Currently Amended): The article of claim 27 wherein the coated surface is heated, the heating step occurring after applying the <u>perfluoropolyether-solvent lubricant-solvent</u> solution to the surface and <u>prior to exposing the coated surface to the energy source</u>.

Claim 29 (Currently Amended): The article of claim 25 wherein the <u>perfluoropolyether</u> compound is a functionalized perfluoropolyether compound. <del>Interioral is selected from one or more groups comprising a fluorochemical compound, a perfluoropolyether compound, a functionalized perfluoropolyether compound, and mixtures thereof.</del>

Claim 30 (Currently Amended): The article of claim 25 wherein the <u>perfluoropolyether</u> <u>compound is mixed with lubricant contains</u> additives selected from one or more groups comprising free radical initiators, viscosity modifiers, thickening agents, surfactants, wetting agents, anticorrosive agents, rust inhibiting agents, antioxidants, antacids, antiwear agents, buffering agents, dyes, and mixtures thereof.

Claim 31 (Cancelled)
